

ABSTRACT

A content reproduction apparatus 20 includes: a storage section 230 for storing a source-ID list L and method identification information 232; a reproduction control method determination section 240 for determining a method to control reproduction of a content on the basis of the method identification information 232; a first reproducibility determination section 242a, which is used for producing a result of determination as to whether or not a content to be reproduced is reproducible by determining whether or not a source ID attached to the content is a source ID included in the source-ID list L in case the reproduction control method determination section 240 determines that the method to control reproduction of a content is a first reproduction control method; a second reproducibility determination section 242b, which is used for producing a result of determination as to whether or not a content to be reproduced is reproducible on the basis of usage rule information described in a license issued to the content in case the reproduction control method determination section 240 determines that the method to control reproduction of a content is a second reproduction control method; and a reproduction

execution section 244 for reproducing a content
determined as a reproducible content.
